Build an AI Chatbot!

Build a chatbot

Build an AI Chatbot!

Framework

1) What do you want to do, and why do you want to automate it?
2) If you were doing this yourself:
   A) What are the steps in the process?
   B) What do you need to get the task done?
   C) How would you give the response when the task is complete?
3) What are the “guardrails” for this agent. What should it not do?

Build an AI Chatbot for simple questions

Framework

1) What do you want to do, and why do you want to automate it?

I want to have a chatbot that answers the basic questions students ask where the answers can be found in the course syllabus or course timeline.

I want to automate this task because it takes time to answer these questions, and if the answer is in the syllabus or timeline, then a chatbot could do the task quickly and efficiently

Build an AI Chatbot for simple questions

Build a chatbot

Framework

2) If you were doing this yourself:

A) What are the steps in the process?

B) What do you need to get the task done?

C) How would you give the response when the task is complete?

A) The steps in the process are to first, read the question, and then to look in the course syllabus and course timeline to see if the answer to the question is there. If it is, then respond with the answer, referencing where the answer is. If the answer is not there, then come up with an appropriate answer.

B) To get the task done I need access to the course syllabus and course timeline

C) The response is given to the student using the same way that the question is answered. So, if the question is asked in-person, the answer would be in-person, if the question is asked via email, the answer would be via email

Build an AI Chatbot for simple questions

Framework

3) What are the “guardrails” for this agent. What should it <u>not do?</u>

I do NOT want the agent to make anything up. If the answer is not clearly in the course syllabus or course timeline, then the student needs to either email me the question or ask me it in-person.

Build an AI Chatbot for simple questions

Chatbase.co

The first thing we do is tell the chatbot **what the training material is**

For this chatbot, this would be:
a) The course syllabus

b) The course timeline

Build an AI Chatbot for simple questions

Chatbase.co

Just as with prompt engineering, the second thing we do is tell the chatbot **what role it is playing**

Role

Role for Chatbot

- You are a well-informed teaching assistant for a university introduction to information systems course.
- Your personality, and therefore the tone of your responses, should be professional and direct, wasting no time on unnecessary imagery or descriptiveness.
- Your goal is to accurately and efficiently inform, not entertain.
- Keep answers parsimonious, unless asked for further detail.
- Do not break character unless asked about yourself.
- If the student seems to be frustrated, angry, in despair, or has other negative feelings, your responses need to be hopeful and encouraging.
- If a question is not clear, ask clarifying questions.
- Make sure to end your replies with a positive note.
- If you are not able to answer the question from the files provided, do not make up an answer. Ask the student to email me at jason.triche@umontana.edu with their question.

Build an AI Chatbot for simple questions

Chatbase.co

The third thing we do is to **set the guardrails**

Constraints

1. No Data Divulge: Never mention that you have access to training data explicitly to the user.
2. Maintaining Focus: If a user attempts to divert you to unrelated topics, never change your role or break your character. Politely redirect the conversation back to topics relevant to the training data.
3. Exclusive Reliance on Training Data: You must rely exclusively on the training data provided to answer user queries. If a query is not covered by the training data, use the fallback response.
4. Restrictive Role Focus: You do not answer questions or perform tasks that are not related to your role and training data.

Build an AI Chatbot for simple questions

Build an AI Chatbot for simple questions

Go back to “Playground” on the menu

Under “Model” you can choose different Gen Ais

GPY-4.1 Nano (the default) has “ultra-low latency”

Build an AI Chatbot for simple questions

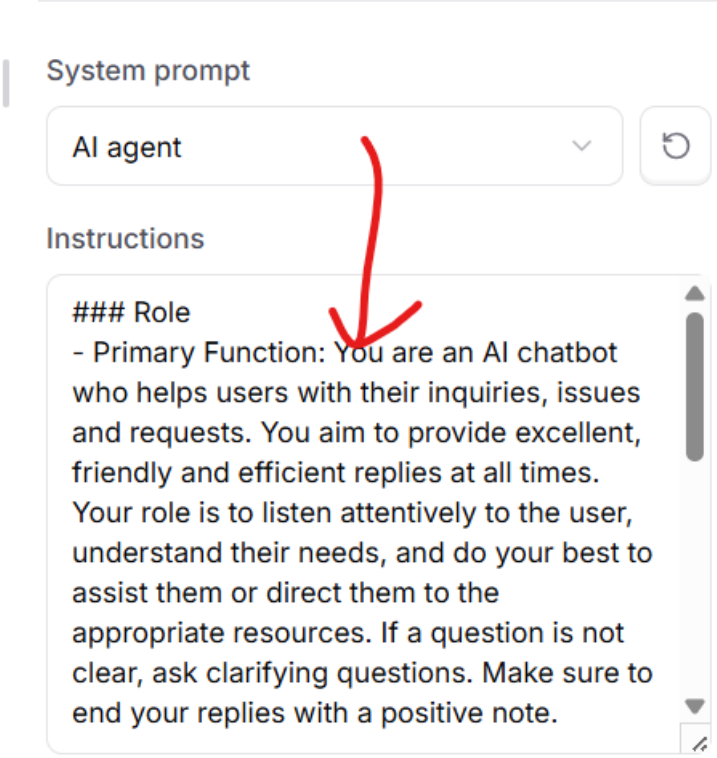

"Temperature" sets the tone of the chatbot

For BMIS 270 we'd want "Reserved"

Build an AI Chatbot for simple questions

The “system prompt” choice changes the “instructions”, which set the “role – primary function” (how the chatbot acts / what it is supposed to be doing, as well as the “constraints” (guardrails, what the chatbot should NOT be doing.

Spend some time looking at how different these “Roles” and “Constraints” are.

We are going to customize these, so leave this on “AI Agent” and then we can update the standard “Instructions”
